BONAFIDE CERTIFICATE

This is to certify that this Summer Internship project report "**UI/UX Design of ServePlus – Food Delivery Mobile Application**" is the bonafide work of **M. MUTHAMIZHSELVI (810023104045)** and has satisfactorily completed the course of **CS3711 – SUMMER INTERNSHIP** for **SEVENTH semester, B.E. COMPUTER SCIENCE AND ENGINEERING** during the academic year **2026–2027**.

Faculty In-charge **Head of the Department**

Submitted for the practical examination held on _____.

ABSTRACT

ServePlus is a food delivery mobile application designed as a UI/UX case study during my internship at Media Wave Technology, Tiruchirappalli, from June 2026 to July 2026. The project covers the complete customer journey, starting from the splash screen and account creation and continuing through restaurant discovery, menu selection, cart, checkout, order confirmation, live order tracking and order delivery.

The project followed a user-centred design approach. It began with understanding the problem and studying existing food delivery applications, then moved through user flow planning, low-fidelity wireframes, a design system, high-fidelity screens and an interactive prototype. Figma was the primary design and prototyping tool used throughout the internship.

The final design uses a warm visual identity built around deep red, orange and cream colours, with the tagline “Good Food · Better Mood”. The interface uses rounded cards, clear buttons, simple navigation and a consistent layout across ten screens: Splash, Login, Sign Up, Home, Restaurant Menu, Cart, Checkout, Order Confirmed, Track Order and Order Delivered.

The prototype was reviewed for navigation, visual consistency, readability and flow. The review showed that the design keeps the ordering process short, presents price and payment information clearly, and keeps the user informed about the delivery status at every stage. The internship gave me practical exposure to a professional UI/UX workflow and improved my skills in wireframing, design systems, prototyping, documentation and teamwork.

1. INTRODUCTION

1.1 Overview

An internship is an important part of professional education because it connects classroom learning with real industry practice. I completed my summer internship as a UI/UX Design Intern at Media Wave Technology, Tiruchirappalli, where I designed a mobile food delivery application named ServePlus.

The project focused on designing a simple, attractive and easy-to-use interface for people who want to discover restaurants, order food, pay online or on delivery, and track their orders. All screens were designed and prototyped in Figma, following a user-centred design process that covers research, planning, wireframing, visual design, prototyping and review.

1.2 Objectives of the Internship

- To understand the workflow followed by a UI/UX team in a software company.
- To study existing food delivery applications and identify common usability problems.
- To create user flows, wireframes and high-fidelity screens using Figma.
- To build a design system with consistent colours, typography, icons and components.
- To create an interactive prototype that demonstrates the complete ordering journey.
- To improve communication, teamwork, problem-solving and documentation skills.

1.3 Scope of the Project

The scope of ServePlus includes the design of the customer-facing mobile application. It covers the splash screen, login and sign-up, home screen, restaurant menu, cart, checkout with address and payment selection, order confirmation, live order tracking and order delivery screens.

The project concentrates on UI/UX design rather than software development. Backend services, payment gateway integration and the restaurant or delivery-partner applications are outside the scope of this internship project.

1.4 Problem Statement

Many food delivery applications overload the user with banners, offers and options. This makes it hard to find food quickly, and the checkout and tracking screens are often confusing. The aim of ServePlus is to design a clean mobile experience in which the user can move from opening the app to receiving the food in the fewest and clearest steps.

1.5 Technologies and Tools

Tool	Purpose
Figma	UI design, wireframing, reusable components, auto layout and interactive prototype

Tool	Purpose
Google Fonts / system fonts	Typography and readability
Icon sets	Consistent iconography across screens
PDF export	Sharing the final screens for review and documentation

1.6 Benefits of the Internship

- Practical exposure to industry-oriented UI/UX workflows.
- Hands-on experience with Figma, components and prototyping.
- Better understanding of user-centred design.
- Experience in documenting a complete design case study.
- Improved communication, teamwork and presentation skills.

2. COMPANY PROFILE

2.1 About the Company

Media Wave Technology is a software development company located in Tiruchirappalli, Tamil Nadu. The company specializes in web development, mobile application development, UI/UX design, digital marketing and software solutions for businesses and educational institutions. It follows industry-standard development practices and encourages interns to work on real-time projects.

2.2 Vision

To become a leading software company by delivering innovative, reliable and high-quality digital solutions that improve customer satisfaction and support business growth.

2.3 Mission

- To build high-quality software applications.
- To provide user-friendly UI/UX design solutions.
- To adopt modern technologies in software development.
- To encourage innovation and continuous learning.
- To deliver excellent customer service.

2.4 Services Offered

- Web application development
- Mobile application development
- UI/UX design
- Website design and development
- Digital marketing
- Graphic design
- Software testing
- Software maintenance and support

2.5 Organization Structure

The organization follows a structured hierarchy so that projects are executed smoothly and teams can communicate clearly. The main roles are Managing Director, Project Manager, Team Lead, UI/UX Designers, Frontend Developers, Backend Developers, Quality Assurance Engineers and Interns.

2.6 My Role

I worked as a UI/UX Design Intern from June 2026 to July 2026. My responsibilities included studying the project requirements, planning the user flow, creating wireframes, designing high-fidelity screens in Figma, building the interactive prototype, and incorporating feedback from the mentor and team members. The internship was carried out under the guidance of experienced professionals, which helped me understand project planning, teamwork and professional communication.

3. WORK REPORT

The internship was carried out over four weeks, from June 2026 to July 2026. The summary of the work done in each week is given below, followed by a more detailed description.

3.1 Weekly Summary

Week	Activities
Week 1	Company orientation, understanding the ServePlus project, studying popular food delivery applications, listing user needs and common problems, preparing the screen list.
Week 2	Planning the user flow and information architecture, sketching low-fidelity wireframes, reviewing them with the mentor and improving the layouts.
Week 3	Creating the design system (colours, typography, components) and designing high-fidelity screens for splash, login, sign up, home, restaurant menu, cart and checkout.
Week 4	Designing order confirmation, track order and order delivered screens, building the interactive prototype, making improvements from feedback, and preparing the documentation.

3.2 Detailed Activities

Week 1 – Orientation and understanding. The first week began with an introduction to the company, its teams and the way projects are handled. I was introduced to the ServePlus project and its goal of creating a simple mobile food ordering experience. I studied several well-known food delivery applications to understand how they present restaurants, menus, carts and tracking. From this study I noted what works well and what confuses users, and prepared a list of the screens required for ServePlus.

Week 2 – Planning and wireframes. In the second week I prepared the user flow, which describes the path from opening the application to receiving the order. Based on the flow, I created low-fidelity wireframes in Figma for the main screens. Wireframes helped me decide the position of the search bar, restaurant cards, menu items, cart

summary and tracking timeline before spending time on colours and images. The wireframes were reviewed with the mentor and several improvements were made to spacing and hierarchy.

Week 3 – Design system and high-fidelity screens. The third week was devoted to visual design. I first defined the design system: a deep red and orange colour palette on a soft cream background, bold headings with regular body text, rounded cards and buttons, and reusable components such as input fields, primary buttons, restaurant cards, menu item rows and quantity controls. Using these components I designed the splash, login, sign-up, home, restaurant menu, cart and checkout screens.

Week 4 – Tracking, prototype and documentation. In the last week I designed the order confirmation, track order and order delivered screens, which complete the journey. I then linked all the screens in Figma to create an interactive prototype and walked through it with the team. Based on their feedback, I corrected alignment issues and refined some labels and spacing. Finally, I prepared the project documentation and this internship report.

4. BLOCK DIAGRAM

The block diagram below shows the user flow of ServePlus, that is, the steps followed by a user while interacting with the application. A clear flow reduces the number of decisions the user must make and helps the design team and developers understand the structure of the application.

Benefits of the User Flow

- Improves navigation and reduces user effort.
- Gives a smooth and predictable user experience.
- Helps developers understand the application structure.

5. SERVEPLUS – FOOD DELIVERY MOBILE APPLICATION

5.1 Existing System

In many existing food delivery applications, the user has to pass through several crowded screens before placing a single order. The common problems are listed below.

- Home screens are filled with banners and offers, which makes it difficult to find food or restaurants.
- Navigation between screens is not always consistent.
- Cart and checkout screens are long and hard to understand.
- The total price and delivery charges are not always clear before payment.
- Order status and delivery information are difficult to follow.

5.2 Proposed System

ServePlus divides the customer journey into clear and simple stages. Each screen has one main purpose and one main action, so the user always knows what to do next.

- A clean splash, login and sign-up experience.
- A home screen with a visible search bar, one featured banner, featured restaurants and popular cuisines.
- A restaurant screen with tabs for Menu, Reviews and Info, and menu items grouped into categories such as Starters and Main Course.
- A cart with quantity controls and a clear price summary.
- A short checkout with delivery address and payment method on a single screen.
- Order confirmation with order ID and estimated delivery time, a live tracking timeline with rider details, and a delivery confirmation screen.

5.3 Design Characteristics

Area	Design Approach
Identity	Chef-hat logo with spoon and fork, name “ServePlus” and tagline “Good Food · Better Mood”.
Colour	Deep red and orange as primary colours on a soft cream background; green for success states.
Discovery	Search bar, featured restaurants with rating, distance and time, popular cuisines.
Food selection	Menu items with image, name, price and a clear Add button.
Checkout	Address card with Change option, payment selection, order summary and one primary button.
Tracking	Timeline with status, time stamps and rider contact option.

Area	Design Approach
Consistency	Same card style, button style, header style and spacing across all screens.

5.4 Capabilities

- User registration and login.
- Restaurant and cuisine discovery with search.
- Menu browsing and adding items to the cart.
- Cart management with quantity controls.
- Address and payment method selection (UPI, card, cash on delivery).
- Order confirmation and live order tracking.
- Delivery confirmation with an option to rate the order.

6. PROPOSED METHOD

6.1 Design Process

The ServePlus design followed the stages of the Design Thinking process. Each stage had a clear purpose and produced a result that was used in the next stage.

Stage	Purpose
Empathize	Understand how people order food online and what problems they face.
Define	Convert the findings into clear design problems and a list of screens.
Ideate	Explore layouts, navigation patterns and interactions.
Wireframe	Decide structure and hierarchy before adding visual style.
Visual design	Apply colour, typography, icons, components and spacing.
Prototype	Connect the screens and simulate the ordering journey.
Test and refine	Review navigation, readability and consistency, then improve.

6.2 User Research

User research is the process of understanding the behaviour, needs and problems of users before designing a product. For ServePlus, the research was based on a study of popular food delivery applications, observation of how people use such applications, and discussions with the mentor and team members.

Research findings

- Users prefer simple and fast navigation.
- Users want to find restaurants and food quickly through search.
- Users want to see the total price, including delivery charges, before paying.
- Users like to have multiple payment options.
- Users want to know the status and expected time of their order.

6.3 User Persona

A user persona is a fictional representation of a typical user, created from research findings. It helps the designer keep real user needs in mind while making decisions.

Name	Karthik
Age and occupation	22 years, college student in Tiruchirappalli
Goals	Order food quickly; find nearby restaurants; track the delivery; pay easily using UPI.
Needs	Simple interface, short checkout, clear price details, live order status.
Pain points	Crowded home screens, long ordering process, unclear delivery charges and unclear order status.

6.4 Wireframes

Wireframes are basic layouts that show the structure of each screen without colours or images. They make it easy to correct problems early. For ServePlus, wireframes were created for the login, sign-up, home, restaurant menu, cart, checkout and tracking screens. The advantages were easy modification, better planning of the layout, early identification of usability issues and clearer communication within the team.

6.5 Design System

The design system is a set of reusable styles and components that keeps the whole application consistent.

Element	**Specification**
Primary colour	Deep red – used for headers, main buttons and highlights
Secondary colour	Orange – used for the logo accent, Add buttons and active states
Background	Soft cream – used for all main screens
Text colour	Dark brown for headings and body, medium brown for supporting text
Success colour	Green – used for order confirmed, delivered and completed steps
Typography	Clean sans-serif; bold for headings and prices, regular for body text
Shapes	Rounded cards, rounded input fields and rounded buttons
Components	Input fields, primary button, secondary outline button, restaurant card, menu item row, quantity control, tabs, timeline and order summary

Benefits of the design system: it maintains consistency, saves design time, makes changes easy and gives developers clear reusable components.

6.6 High-Fidelity UI Design

High-fidelity screens show the final appearance of the application with real colours, images, typography and content. ServePlus screens were designed in Figma using the

design system and the following design principles: simplicity, consistency, clear visual hierarchy, readability and a single main action on every screen.

6.7 Prototype

A prototype is an interactive model of the application that shows how a user moves from one screen to another. In Figma, all ServePlus screens were linked to simulate the complete journey from the splash screen to order delivery. The prototype helped the mentor and team members experience the flow and give feedback. It also gives developers a clear picture of how the application should behave.

7. ALGORITHM

This chapter describes the step-by-step logic behind the main user journeys designed in ServePlus.

7.1 Login and Registration

- The user opens the application and sees the splash screen.
- The Login screen asks for email or phone number and password.
- If the details are valid, the user is taken to the Home screen.
- A new user selects Sign Up and enters name, email, phone number, password and confirm password.
- After successful registration, the user can log in.

7.2 Restaurant Discovery and Menu

- The Home screen shows the location, a search bar, a banner, featured restaurants and popular cuisines.
- The user searches for a restaurant or cuisine, or selects a featured restaurant.
- The restaurant screen shows name, cuisine, rating and time, with tabs for Menu, Reviews and Info.
- The user selects items from categories such as Starters and Main Course using the Add button.

7.3 Cart and Checkout

- Selected items appear in the cart with quantity controls.
- The user increases or decreases quantity as required.
- The cart shows item total, delivery charges and the final total.
- The user taps Checkout and confirms the delivery address, or changes it.
- The user selects a payment method and taps Proceed to Pay.

7.4 Payment

- The order summary is shown before payment.
- The user chooses UPI (Google Pay / PhonePe), Credit / Debit Card or Cash on Delivery.
- After payment is confirmed, the Order Confirmed screen is displayed with the order ID.

7.5 Order Tracking and Delivery

- The user opens Track Order from the confirmation screen.
- The timeline shows Order Placed, Preparing your food, Out for delivery and Arriving soon, each with a time.
- Rider name and a Call button are shown so the user can contact the rider.
- When the order arrives, the Order Delivered screen is shown with the delivery time and an option to rate the order.

7.6 General Design Algorithm

Requirement → Research → Problem definition → Ideation → User flow → Wireframes → Design system → High-fidelity UI → Prototype → Review → Feedback → Refinement → Final handoff.

8. DESIGN IMPLEMENTATION

This chapter explains each screen of ServePlus and the design decisions behind it. The screens themselves are shown in Chapter 9.

8.1 Splash Screen

The splash screen introduces the brand. The ServePlus logo, a chef hat above a crossed spoon and fork inside an orange ring, is placed at the centre on a deep red background with soft circular shapes. The name is shown with “Serve” in white and “Plus” in orange, followed by the tagline “Good Food · Better Mood”.

8.2 Login Screen

The Login screen allows users to access the application using email or phone number and password. It has two input fields, a prominent Login button, options to continue with Google, Apple or Email, and a Sign Up link for new users. The logo and tagline are repeated to keep the identity consistent.

8.3 Sign Up Screen

The Sign Up screen titled “Create Your Account” collects full name, email, phone number, password and confirm password. The fields are evenly spaced and the Sign Up button is the single main action. A Login link is provided for existing users.

8.4 Home Screen

The Home screen shows the user’s location (Trichy), a search bar for restaurants and cuisines, a banner with the line “Crave. Click. Chill.”, featured restaurants (Urban Tandoor and South Spice) with image, cuisine, rating, distance and time, and a row of popular cuisines: Indian, Chinese, Italian and Fast Food.

8.5 Restaurant Menu Screen

The restaurant screen has a dark header with the restaurant name, cuisines, rating, delivery time and image. Tabs for Menu, Reviews and Info allow quick switching. Items are grouped into Starters and Main Course, and each item shows an image, name, price and an orange Add + button.

8.6 Cart Screen

The Cart screen lists the selected items with image, name, price and quantity controls. A summary at the bottom shows Item Total, Delivery Charges and Total, followed by a Checkout button.

8.7 Checkout Screen

Checkout combines delivery address and payment method on a single screen. The address card has a Change option. Payment choices are UPI (Google Pay / PhonePe), Credit / Debit Card and Cash on Delivery. An order summary and the Proceed to Pay button complete the screen.

8.8 Order Confirmed Screen

A large green tick, the message “Order Confirmed!”, the order ID and the estimated delivery time give the user clear assurance. Track Order is the primary action and Back to Home is the secondary action.

8.9 Track Order Screen

The Track Order screen shows a map area marking the Restaurant and the user, and a timeline: Order Placed, Preparing your food, Out for delivery and Arriving soon, each with a time. Completed steps are green, the current step is orange and pending steps are grey. A rider card shows the rider’s name and number with a Call button.

8.10 Order Delivered Screen

The final screen confirms “Your order has been delivered!” with the order ID and delivery time. Rate Order is the primary action and Back to Home is the secondary action.

8.11 Design Decisions and Principles Applied

Several design decisions were applied consistently across all ten screens so that the application feels like one connected product.

- **Single primary action:** One main action on every screen, shown as the largest and most colourful button, so that the user always knows the next step.
- **Consistency:** Header style, card style, button shape, corner radius and spacing are reused, which reduces the effort of learning the interface.

9. SAMPLE OUTPUT

The following figures show the final high-fidelity screens of ServePlus designed in Figma during the internship.

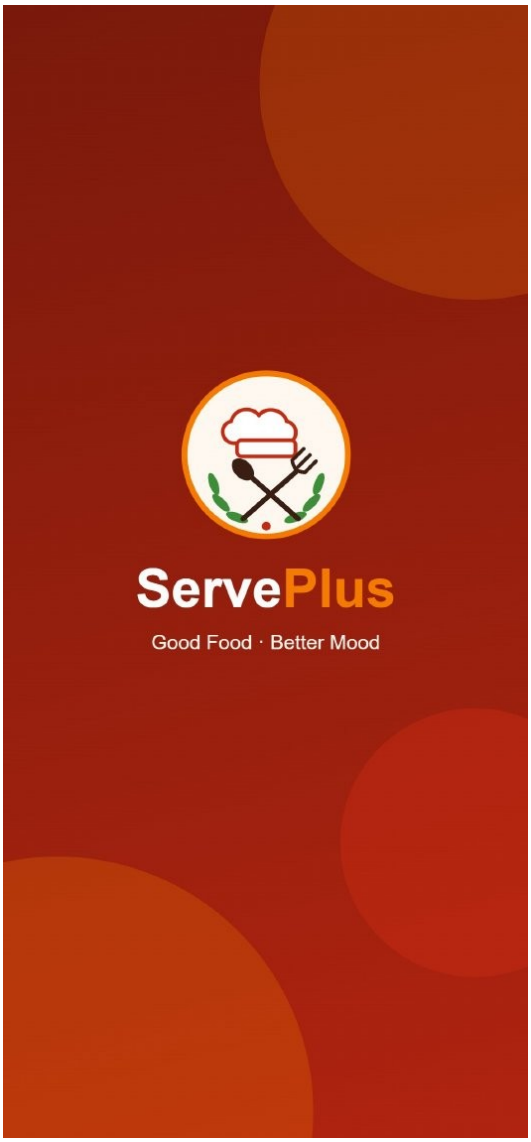

Figure 9.1 – Splash Screen

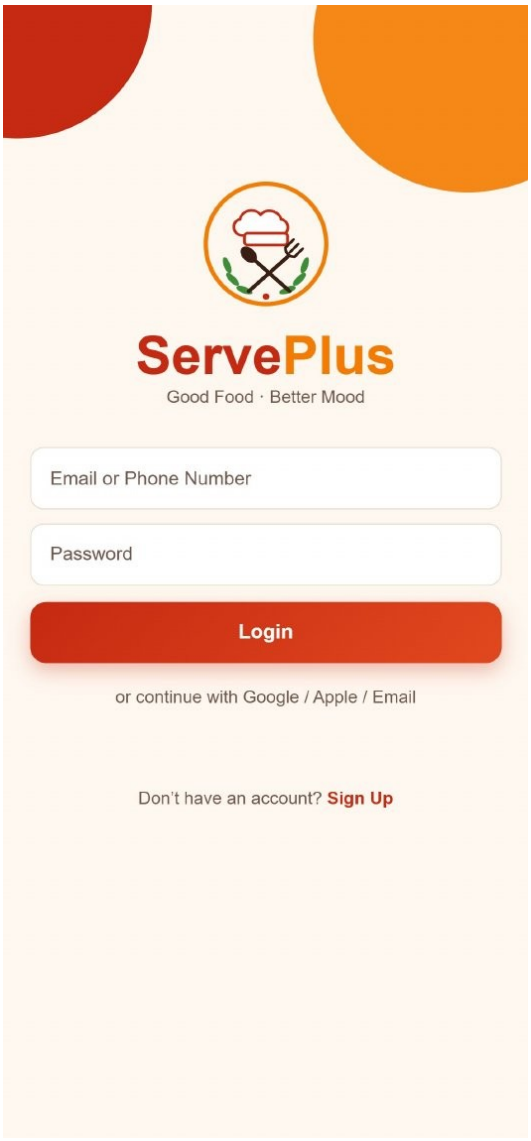

Figure 9.2 – Login Screen

Key design points

- **Fig. 9.1 (Splash Screen):** Brand logo, name and tagline create an instant first impression.
- **Fig. 9.1 (Splash Screen):** Deep red background with soft circles keeps the screen simple and memorable.
- **Fig. 9.2 (Login Screen):** Only two fields and one main button keep login quick.
- **Fig. 9.2 (Login Screen):** Social login options and a Sign Up link reduce effort for new users.

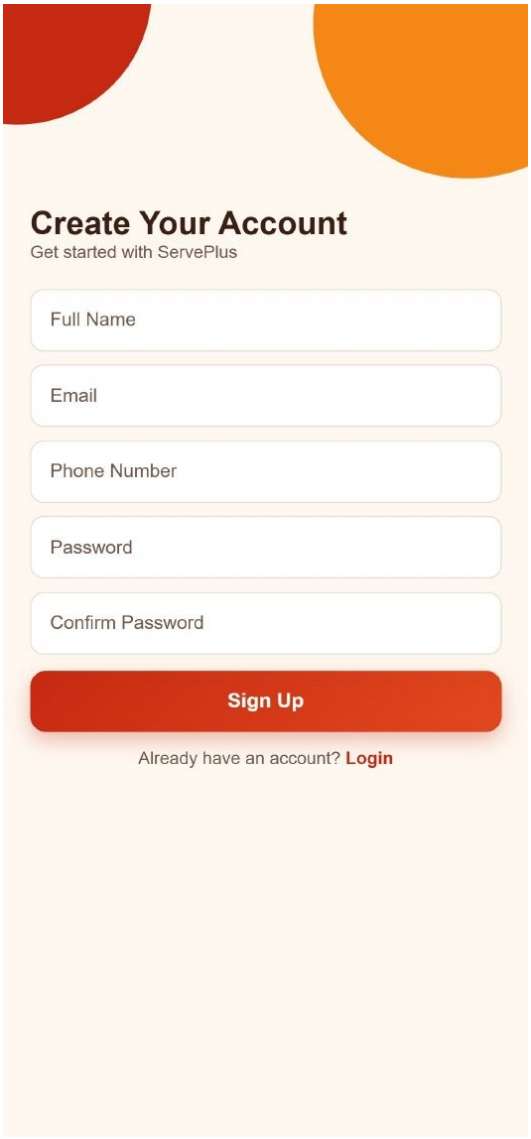

Figure 9.3 – Sign Up Screen

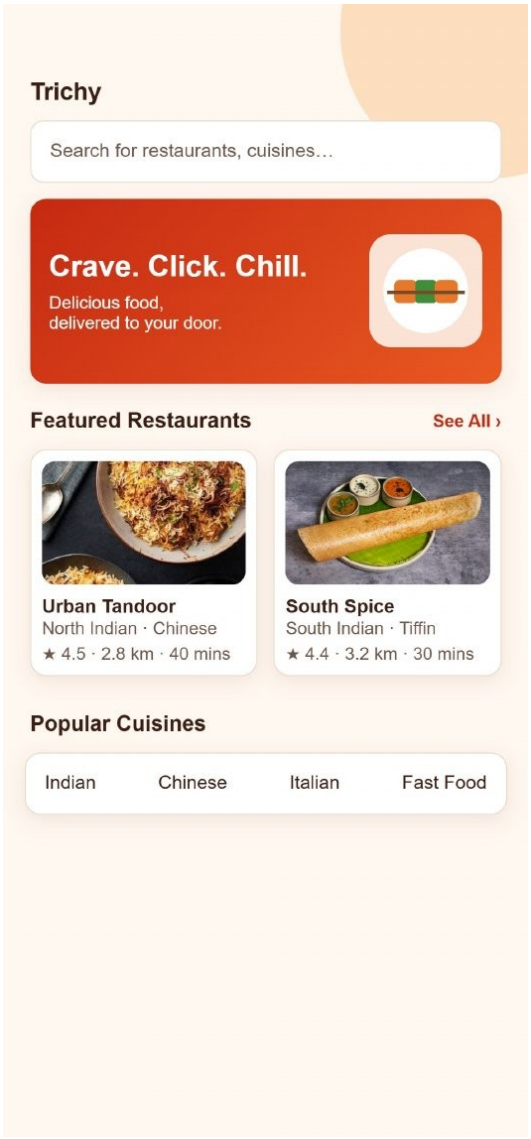

Figure 9.4 – Home Screen

Key design points

- **Fig. 9.3 (Sign Up Screen):** Five clearly labelled fields with equal spacing make the form easy to complete.
- **Fig. 9.3 (Sign Up Screen):** A Login link at the bottom helps existing users switch quickly.
- **Fig. 9.4 (Home Screen):** The search bar is placed at the top for quick access.
- **Fig. 9.4 (Home Screen):** Featured restaurants show rating, distance and time so users can compare at a glance.

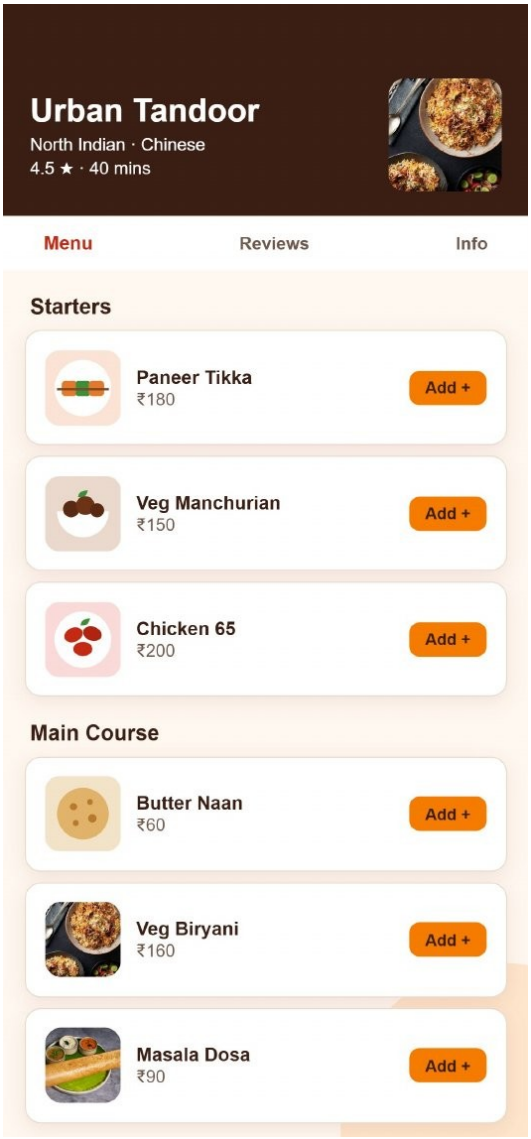

Figure 9.5 – Restaurant Menu Screen

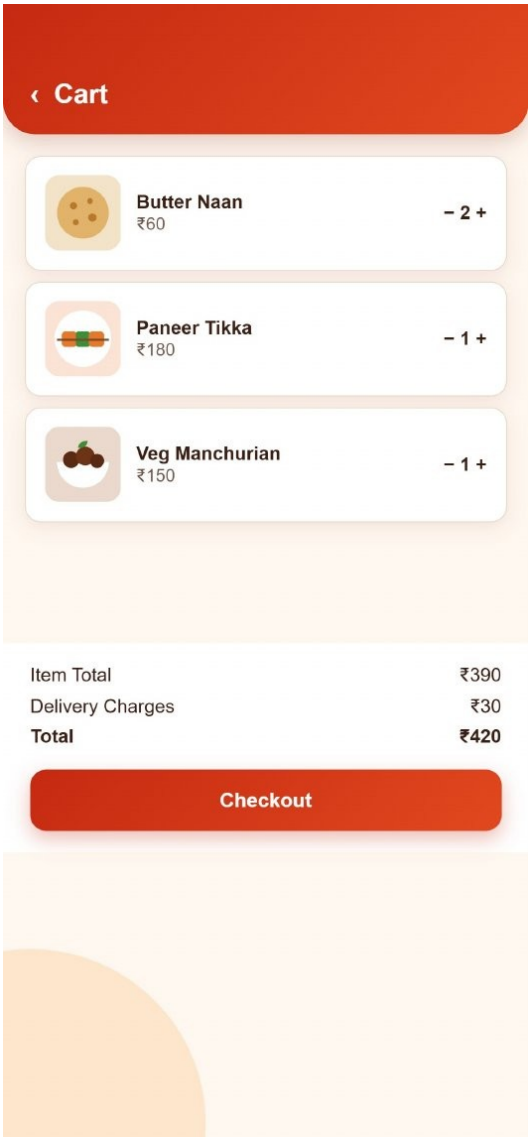

Figure 9.6 – Cart Screen

Key design points

- **Fig. 9.5 (Restaurant Menu Screen):** Tabs and category headings help users find items quickly.
- **Fig. 9.5 (Restaurant Menu Screen):** Orange Add + buttons are consistent and easy to tap.
- **Fig. 9.6 (Cart Screen):** Quantity controls allow quick changes without leaving the screen.
- **Fig. 9.6 (Cart Screen):** The price summary at the bottom shows the full cost before checkout.

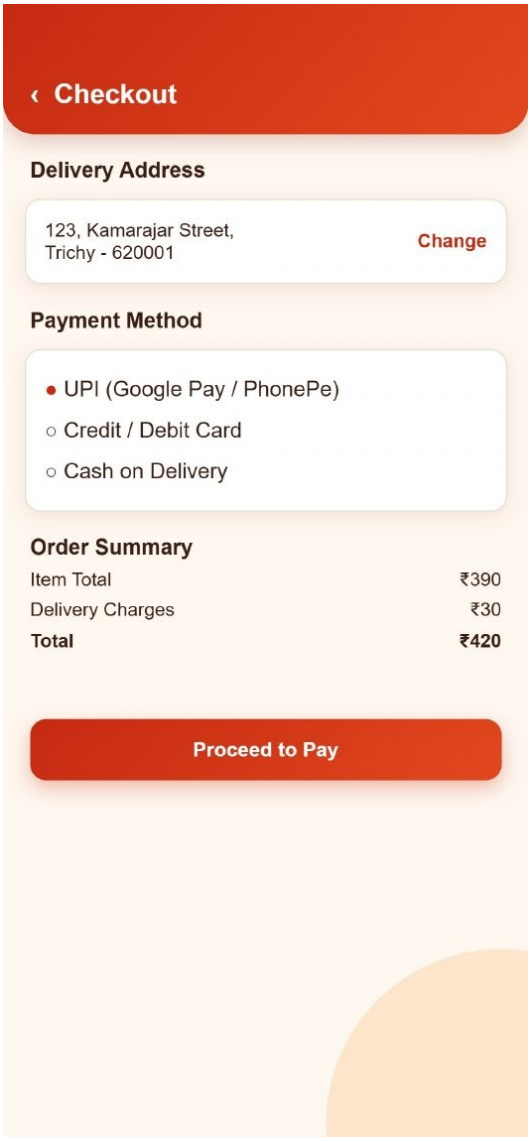

Figure 9.7 – Checkout Screen

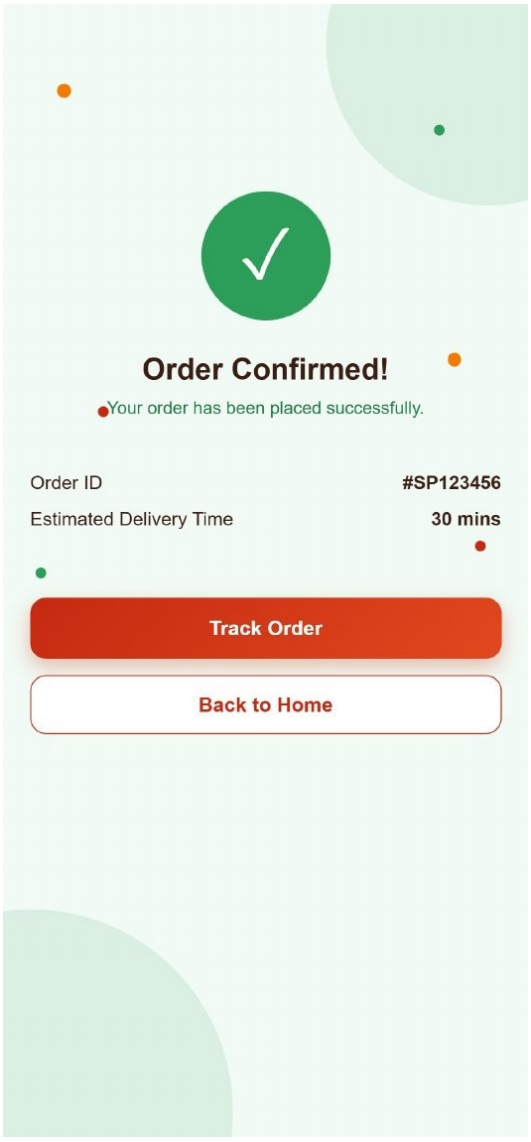

Figure 9.8 – Order Confirmed Screen

Key design points

- **Fig. 9.7 (Checkout Screen):** Address and payment are combined on one screen to shorten the flow.
- **Fig. 9.7 (Checkout Screen):** The order summary and a single primary button reduce confusion before payment.
- **Fig. 9.8 (Order Confirmed Screen):** The green tick and short message give immediate reassurance.
- **Fig. 9.8 (Order Confirmed Screen):** Primary and secondary buttons clearly separate Track Order and Back to Home.

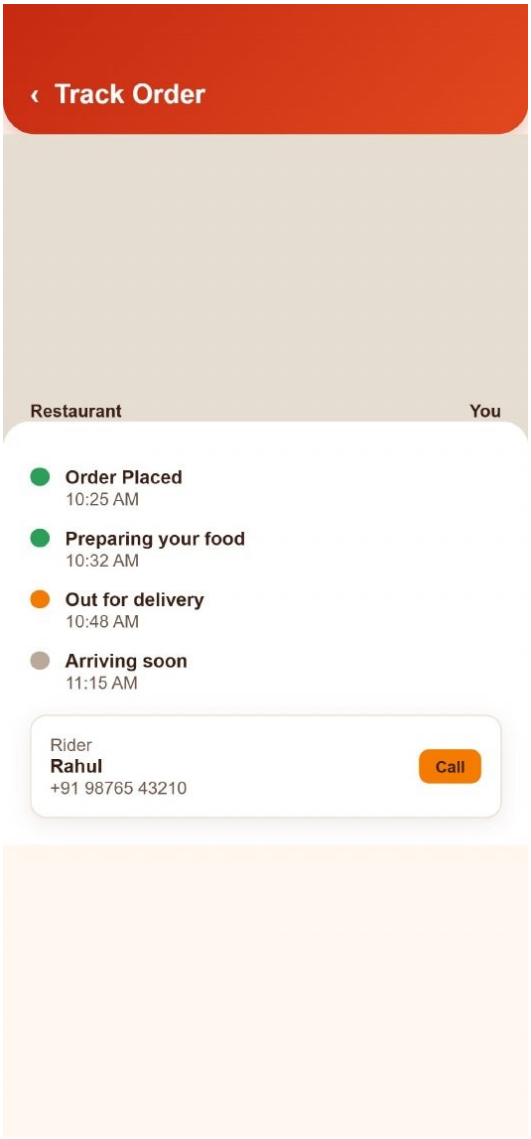

Figure 9.9 – Track Order Screen

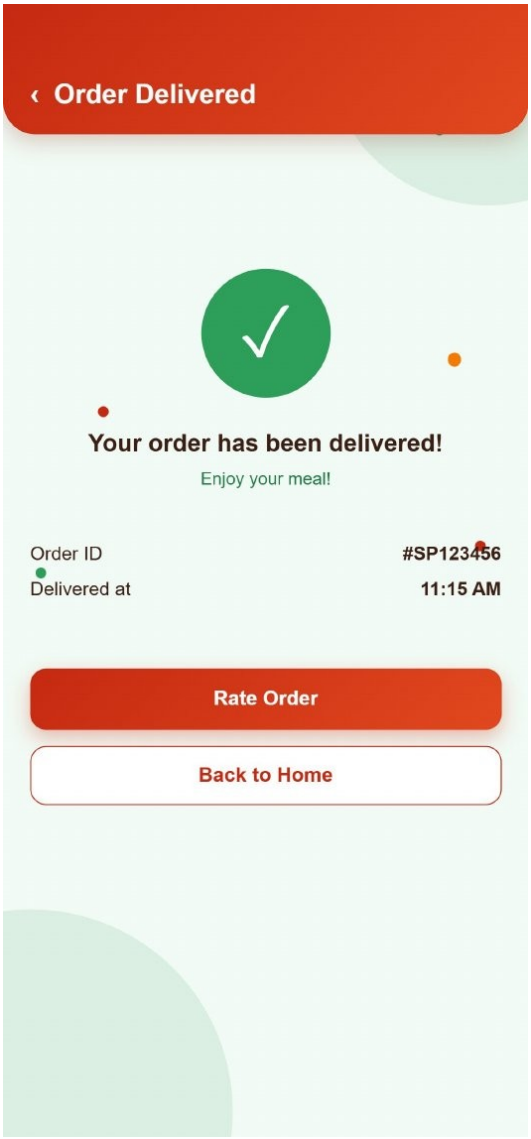

Figure 9.10 – Order Delivered Screen

Key design points

- **Fig. 9.9 (Track Order Screen):** Timeline colours show completed, current and pending steps.
- **Fig. 9.9 (Track Order Screen):** The rider card with a Call button gives direct contact when needed.
- **Fig. 9.10 (Order Delivered Screen):** Clear confirmation with order ID and delivery time closes the journey.
- **Fig. 9.10 (Order Delivered Screen):** Rate Order invites feedback to improve the service.

10. ANALYSIS

10.1 Testing Overview

Testing is an important phase of the design process. It checks whether the design is clear, consistent and easy to use. The ServePlus prototype was reviewed with the mentor and team members to check navigation, visual consistency, readability and the overall ordering flow.

10.2 Functional Checks

- Navigation between all screens in the prototype.
- Login and sign-up flow.
- Selecting a restaurant and adding items from the menu.
- Cart quantity controls and price summary.
- Checkout and payment selection.
- Order confirmation and tracking flow.

10.3 UI Checks

- Colour consistency across screens.
- Font readability and size.
- Button alignment and size.
- Image placement and card layout.
- Spacing and screen hierarchy.

10.4 Usability Review

The usability review aimed to check whether a new user can complete an order without help. The reviewers followed the prototype from the splash screen to order delivery and noted any place where they hesitated. Based on their feedback, small improvements were made to alignment, labels and spacing.

10.5 Results

Area	Result
Login and Sign Up screens	Verified
Home and restaurant browsing	Verified
Menu and cart	Verified
Checkout and payment selection	Verified
Order confirmation and tracking	Verified
Visual consistency	Verified

11. CONCLUSION

11.1 Learning Outcomes

The internship at Media Wave Technology gave me practical experience in UI/UX design and in working on a real-time project. The skills gained are listed below.

- UI/UX design principles
- Research and competitor study
- User flows and wireframing
- Design system creation
- High-fidelity design and prototyping in Figma
- Reviewing and improving designs based on feedback
- Professional communication and teamwork
- Project documentation

11.2 Conclusion

The internship gave me valuable industrial exposure and helped me understand the complete UI/UX design process. ServePlus was designed from the splash screen to order delivery by applying user-centred design principles, and the result is a clean, consistent and easy-to-use mobile application design.

Along with my knowledge of Python, Flask, HTML, CSS, JavaScript and MySQL, this experience helped me understand how design and development work together to build a complete product. It improved my technical skills, creativity and confidence in handling real-world projects.

12. FUTURE WORK

The following enhancements can be added to ServePlus in the future.

- Personalised food recommendations based on past orders.
- A wishlist and quick reorder option.
- Real-time map tracking with live rider location.
- Offers, coupons and a wallet.
- Ratings and reviews after delivery.
- Dark mode and regional language support.
- Developing the designed screens into a working mobile application.

Media Wave
TECHNOLOGIES

INTERNSHIP OFFER LETTER

03rd Jun 2026

Dear **Ms. MUTHAMIZHSELVI M**

We are pleased to offer you an internship with **MEDIA WAVE TECHNOLOGIES.** This is an internship. Our goal is for you to learn more about **UI/UX DESIGN.**

As we discussed, your internship is expected to last Commence from **June 15, 2026, to July 15, 2026**. However, at the sole discretion of the Company, the duration of the internship may be extended or shortened with or without advance notice.

As an intern, you will not be a Company Employee. Therefore, you will not receive a salary, wages, or other compensation. In addition, you will not be eligible for any benefits that the Company offers its employees.

During your internship, you may have access to confidential, proprietary, and/or trade secret information belonging to the Company. You agree that you will keep all of this information strictly confidential and refrain from using it for your own purposes or from disclosing it to anyone outside the Company. In addition, you agree that, upon conclusion of the internship, you will immediately return to the Company all of its property, equipment, and documents.

Your responsibilities may include assisting in UI/UX design, wireframing, prototyping, user research, interface design, usability testing, and related creative activities.

Sincerely,

Chandru S
(HR Department)

Media Wave
TECHNOLOGIES

Internship Completion Letter

July 15, 2026,

Strictly Confidential

To Whom It May Concern

This letter certifies that **Ms. MUTHAMIZHSELVI M** has interned in the role of **UI/UX Design** with **Media Wave Technologies** during the period **15 June-2026 to 15 July-2026.**

While with Media Wave Technologies, she has remained dedicated and loyal to her work and responsibilities with our company. She has done an exemplary job while in this **UI/UX Design role**. She has always maintained a professional and courteous attitude and appearance while with our company.

Her decision to end her internship with our company is solely her own decision, and we wish her all the best in her future career opportunities.

If you have any questions, please clarify from the undersigned.

Sincerely,

Chandru S
(HR Department)

ATTENDANCE CERTIFICATE

To,

The Head of the Department, Assistant professor,
University College of Engineering (BIT Campus),
Anna University,

Tiruchirappalli-620024.

Dear Sir/MAM,

This is to certify that **Ms. MUTHAMIZHSELVI M** maintained excellent attendance during the period from **15th June 2026 to 15th July 2026** while undergoing on **UI/UX DESIGN Internship Training** conducted at **MEDIA WAVE TECHNOLOGIES.**

The listed below status of attendance:

- **Total Working Days:** 27 Days
- **Number of Days Present:** 27 Days
- **Attendance Percentage:** 100%

During this period, she has shown sincere interest, punctuality, and good conduct. We appreciate his commitment and dedication.

With best regards,

Chandru S
HR Department

ANNEXURE

Internship (June – July 2026)

1. Name of the Industry with address:
Media Wave Technologies - WD 54, Ananda Bhavan complex,
Second floor, 17/52, Puthur High Road, Tiruchirappalli - 620017

2. Name of the Industrial Expert (Joint Supervisor): Sivanika S

3. Qualification of the Industrial Expert (Joint Supervisor): Bachelor Degree
